What is PP?

- PP (polypropylene) film is a type of decorative interior film that does not require a paint finish and is made from polypropylene material. Its visual effect can be compared to natural wood grain, making it extremely suitable for processing technologies such as flat lamination and covering. The backing of the film is reinforced with a durable polymer layer.
- Key Advantages of PP Decorative Film:
 - Environmentally Friendly: PP film is non-toxic and does not contain harmful volatile substances such as formaldehyde, acetaldehyde, toluene, or xylene. It is also free from heavy metals.
 - Waste-Free Production: The manufacturing process does not generate three types of waste, making it an eco-friendly option.
 - Biodegradable: When recycled, PP film can decompose, and when burned, it only releases water and CO₂ without producing any harmful gases.
- As a high-performance surface decorative material, PP film is health-friendly and environmentally sustainable, contributing positively to environmental protection efforts.
