

Light - Weighted Environmental Friendly
Easy To Install

Product Introduction

PU stone is a new type of lightweight and environmentally friendly wall decoration board, mainly composed of high-density polyurethane material, made through special processes. It is not only durable and sturdy, but also thermally insulated. Its texture is light, sturdy, durable, and does not fall off. Its color is uniform, and its three-dimensional surface has a true stone appearance. The dry hanging construction method without cement can be easily completed. Its advantages are: light weight, easy transportation, and easy installation. In terms of design applications, it can be applied to almost any commercial, home, and work equipment anywhere.

Product Features

Fast: The direct installation time and the time required for the entire project are much shorter, far less than the installation time of traditional cultural stones.

Lightweight: Due to the use of high-tech materials, it is lightweight and does not require the cooperation of other machinery. It can be installed by a single person.

Durable: The product is composed of polymer materials and sprayed with multiple layers of high-strength coatings, making it acid resistant, sun resistant, and UV resistant, making it more durable to use.

Easy to install: The product is designed as an internal card structure with tongue edges, grooves, and reserved seams. Most jobs do not require caulking and can be installed directly with screws or gun nails.

Real Appearance: The product mold is finely polished based on real stones, and special processing techniques make the appearance of the product more delicate, just like real stones.

PU Earthen Tile Panel

MCB-111

Specification: 1200×180×35mm
